

Example of Class and Object in C++:

```
#include <iostream>
```

```
using namespace std;
```

```
class employeeLpu
```

```
{
```

```
    public:
```

```
    char empName[30];
```

```
    int empld;
```

```
    void setEmpDetails()
```

```
    {
```

```
        cout<<"Enter Employee Name"<<endl;
```

```
        cin.getline(empName,30);
```

```
        cout<<"Enter Employee Id"<<endl;
```

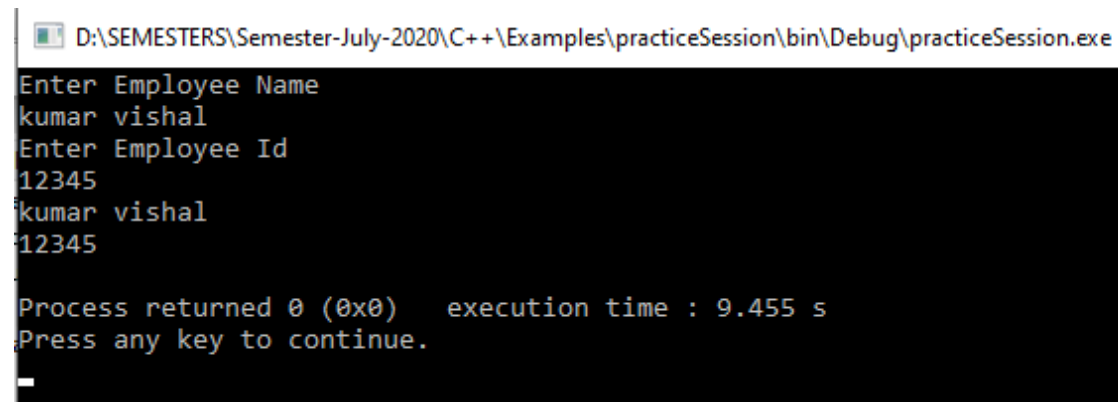

```
        cin>>empld;
```

```
    }
```

```
void getEmpDetails()
{
    cout<<empName<<endl;
    cout<<empId<<endl;
}
};

int main()
{
    employeeLpu e1;
    e1.setEmpDetails();
    e1.getEmpDetails();
    return 0;
}
```

Output:

```
D:\SEMESTERS\Semester-July-2020\C++\Examples\practiceSession\bin\Debug\practiceSession.exe
Enter Employee Name
kumar vishal
Enter Employee Id
12345
kumar vishal
12345
