

## Basic to class type conversion- by using constructor Example:

```
#include <iostream>

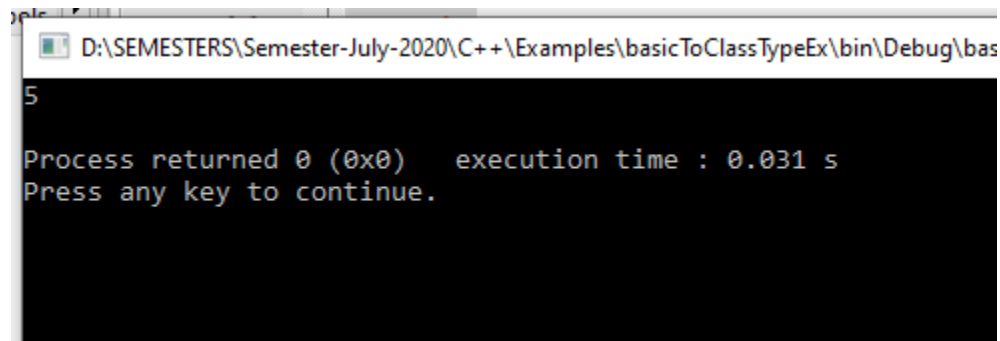

using namespace std;

class A
{
public:
    int a;

    A()
    {
        a=0;
    }
    A(int m)
    {
        a=m;
    }
    void getA()
    {
        cout<<a<<endl;
    }
};

int main()
{
    int x=5;
    A a1;
    a1=x;// basic to class type
    a1.getA();
    return 0;
}
```

Output:

```
D:\SEMESTERS\Semester-July-2020\C++\Examples\basicToClassTypeEx\bin\Debug\bas
5
Process returned 0 (0x0) execution time : 0.031 s
